Thank you for purchasing this Daikin air conditioner. Carefully read this operation manual before using the air conditioner. It will tell you how to use the unit properly and help you if any trouble occurs. After reading the manual, file it away for future reference.

WHAT TO DO BEFORE OPERATION

This operation manual is for the following systems with standard control. Before initiating operation, contact your Daikin dealer for the operation that corresponds to your system.

If your installation has a customized control system, ask your Daikin dealer for the operation that corresponds to your system.

- Heat pump type
  This system provides cooling, heating, automatic, program dry, and fan operation modes.

- Straight cooling type
  This system provides cooling, program dry, and fan operation modes.

NOTE
If the unit you purchased is controlled by a wireless remote controller, also refer to the wireless remote controller's operation manual.

**NOTE**
- For the sake of explanation, all indications are shown on the display in Figure 1 contrary to actual running situations.
SAFETY CONSIDERATIONS

We recommend that you read this instruction manual carefully before use to gain full advantage of the function of the air conditioner, and to avoid malfunction due to mishandling.

- The precautions described below are WARNING and CAUTION. These are very important precautions concerning safety. Be sure to observe all of them without fail.
  
  ▲ WARNING ........ These are the matters with possibilities leading to serious consequences such as death or serious injury due to erroneous handling.
  
  ▲ CAUTION .......... These are the matters with possibilities leading to injury or material damage due to erroneous handling including probabilities leading to serious consequences in some cases.

- After reading, keep this manual at a place where any user can read at any time. Furthermore, make certain that this operation manual is handed to a new user when he takes over the operation.

⚠️ WARNING

- Avoid exposure of your body directly to the cold air for a long time, or avoid excessive exposure of your body to the cold air. Otherwise, your physical condition may be deteriorated and/or your health may be ruined.
- When the air conditioner is in abnormal conditions (smell of something burning, etc.), unplug the power cord from the outlet, and contact the dealer where you purchased the air conditioner. Continued operation under such circumstances may result in a failure, electric shock, and fire.
- Ask your dealer for installation of the air conditioner. Incomplete installation performed by yourself may result in a water leakage, electric shock, and fire.
- Ask your dealer for improvement, repair, and maintenance. Incomplete improvement, repair, and maintenance may result in a water leakage, electric shock, and fire.
- Do not insert your finger, a stick, etc., into the air inlet, outlet, and fan blades.

A fan in high-speed running may result in injury.
- For refrigerant leakage, consult your dealer. When the air conditioner is to be installed in a small room, it is necessary to take proper measures so that the amount of any leaked refrigerant does not exceed the limiting concentration even when it leaks. If the refrigerant leaks exceeding the level of limiting concentration, an oxygen deficiency accident may happen.
- For installation of separately sold component parts, ask a specialist. Be sure to use the separately sold component parts designated by our company. Incomplete installation performed by yourself may result in a water leakage, electric shock, and fire.
- Ask your dealer to move and reinstall the air conditioner. Incomplete installation may result in a water leakage, electric shock, and fire.

⚠️ CAUTION

- Do not use the air conditioner for other purposes. Do not use the air conditioner for a special application such as the storage of foods, animals and plants, precision machines, and art objects as otherwise the deterioration of quality may result.
- Do not remove the air outlet of the outdoor unit. The fan may get exposed and result in injury.
- When the air conditioner is used in combination with burners or heaters, perform sufficient ventilation. Insufficient ventilation may result in an oxygen deficiency accident.
- Check and make sure that foundation blocks are not damaged after a long use. If they are left in a damaged condition, the unit may fall and result in injury.
- Neither place a flammable spray bottle near the air conditioner nor perform spraying. Doing so may result in a fire.
- To clean the air conditioner, stop operation, and unplug the power cord from the outlet. Otherwise, an electric shock and injury may result.
- Do not operate the air conditioner with a wet hand. An electric shock may result.
- Do not use any fuse with improper capacity. The use of a piece of wire and whatnot may result in a failure and fire.
- Do not place a burner or heater at a place directly exposed to the wind from the air conditioner.

Incomplete combustion of the burner or heater may result.
- Do not allow a child to mount on the outdoor unit or avoid placing any object on it. Falling or tumbling may result in injury.
- Do not expose animals and plants directly to the wind. Adverse influence to animals and plants may result.
- Do not wash the air conditioner with water. An electric shock may result.
- Do not install the air conditioner at any place where flammable gas may leak out. If the gas leaks out and stays around the air conditioner, a fire may break out.
- Be sure to install an earth leakage breaker. Unless it is installed, an electric shock may result.
- Be sure the air conditioner is electrically grounded. Do not connect the grounding conductor to a gas pipe, water pipe, lightning arrester, and the grounding conductor for a telephone. Imperfect grounding work may result in an electric shock.
- Execute complete drain piping for perfect drainage. Incomplete piping may result in a water leakage.
INSTALLATION SITE

Regarding places for installation
- Is the air conditioner installed at a well-ventilated place where there are no obstacles around?
- Do not use the air conditioner in the following places.
  a. Filled with much mineral oil such as cutting oil
  b. Where there is much salt such as a beach area
  c. Where sulfured gas exists such as a hot-spring resort
  d. Where there are considerable voltage fluctuations such as a factory or plant
  e. Vehicles and vessels
  f. Where there is much spray of oil and vapor such as a cookery, etc.
  g. Where there are machines generating electromagnetic waves
  h. Filled with acid and/or alkaline steam or vapor
- Is a snow protection measure taken?
  For details, consult your dealer.

Regarding wiring
- All wiring must be performed by an authorized electrician.
  To do wiring, ask your dealer. Never do it by yourself.
- Make sure that a separate power supply circuit is provided for this air conditioner and that all electrical work is carried out by qualified personnel according to local laws and regulations.

Pay attention to running noises, too
- Are the following places selected?
  a. A place that can sufficiently withstand the weight of the air conditioner with less running noises and vibrations.
  b. A place where the hot wind discharged from the air outlet of the outdoor unit and the running noises do not bother your neighbors.
- Are you sure that there are no obstacles near the air outlet of the outdoor unit?
  Such obstacles may result in declined performance and increased running noises.
- If abnormal noises occur in use, consult your dealer.

Regarding drainage of drain piping
- Is the drain piping executed to perform complete drainage?
  If proper drainage is not carried out from the outdoor drain pipes during air-conditioning operation, chances are that dust and dirt are clogged in the pipe. This may result in a water leakage from the indoor unit. Under such circumstances, stop the operation of the air conditioner, and then consult your dealer or our service station.
OPERATION PROCEDURE

- Operating procedure varies with heat pump type and straight cooling type. Contact your Daikin dealer to confirm your system type.
- To protect the unit, turn on the main power switch 6 or 12 hours before operation.
  (Outdoor model K type → 6 hours, FU type → 12 hours)
- If the main power supply is turned off during operation, operation will restart automatically after the power turns back on again.

COOLING, HEATING, AUTOMATIC, AND FAN OPERATION (Fig. 2)

1. Press OPERATION MODE SELECTOR button several times and select the OPERATION MODE of your choice as follows.
   - COOLING OPERATION .............. "Cooling"
   - HEATING OPERATION ............ "Heat"
   - AUTOMATIC OPERATION .......... "Auto"
   - FAN OPERATION ................. "Fan"

- For straight cooling type, “cooling” and “fan” operation are able to select.

AUTOMATIC OPERATION

In this operation mode, COOL/HEAT changeover is automatically conducted.

2. Press ON/OFF button
   OPERATION lamp lights up and the system starts OPERATION.

Adjustment

For programming TEMPERATURE, FAN SPEED and AIR FLOW DIRECTION, follow the procedure shown below.

3. Press TEMPERATURE SETTING button and program the setting temperature.

   ![Temperature setting control](Image)

   - Each time this button is pressed, setting temperature rises 1°C.
   - Each time this button is pressed, setting temperature lowers 1°C.

- The setting is impossible for fan operation.

NOTE: The setting temperature range of the remote controller is 16 to 32°C.

4. Press FAN SPEED CONTROL button.
   High or Low fan speed can be selected.

5. Press AIR FLOW DIRECTION button
   Refer to “ADJUSTING THE AIR FLOW DIRECTION” (p.10) for details.

STOPPING THE SYSTEM

6. Press ON/OFF button once again.
   OPERATION lamp goes off, and the system stops OPERATION.

EXPLANATION OF HEATING OPERATION

DEFROST OPERATION

- As the frost on the coil of an outdoor unit increase, heating effect decreases and the system goes into DEFROST OPERATION.
- The indoor unit fan stops and the remote controller display shows "⑩/⑩⑩".
- After 6 to 8 minutes (maximum 10 minutes) of DEFROST OPERATION, the system returns to HEATING OPERATION.

Regarding outside air temperature and heating capacity

- The heating capacity of the air conditioner declines as the outside air temperature falls. In such a case, use the air conditioner in combination with other heating systems.
- A warm air circulating system is employed, and therefore it takes some time until the entire room is warmed up after the start of operation.
- An indoor fan runs to discharge a gentle wind automatically until the temperature inside the air conditioner reaches a certain level. At this time, the remote controller displays "⑩/⑩⑩". Leave it as it stands and wait for a while.
- When the warm air stays under the ceiling and your feet are cold, we recommend that you use a circulator (a fan to circulate the air inside the room). For details, consult your dealer.

PROGRAM DRY OPERATION (Fig. 3)

- The function of this program is to decrease the humidity in your room with the minimum temperature decrease.
- Micro computer automatically determines TEMPERATURE and FAN SPEED.
- This system does not go into operation if the room temperature is below 16°C.

1. Press OPERATION MODE SELECTOR button several times and select “⑩”
   (PROGRAM DRY OPERATION)

**Press ON/OFF button**

OPERATION lamp lights up and the system starts OPERATION.

**Adjustment**

**Press AIR FLOW DIRECTION ADJUST button.**

Refer to "ADJUSTING THE AIR FLOW DIRECTION" for details.

**STOPPING THE SYSTEM**

**Press ON/OFF button again.**

OPERATION lamp goes off and the system stops OPERATION.

### ADJUSTING THE AIR FLOW DIRECTION (Fig. 4)

Press the AIR FLOW DIRECTION button to adjust the air flow angle.

- The movable limit of the flap is changeable. Contact your Daikin dealer for details.

**Press the AIR FLOW DIRECTION ADJUST button to select the air direction as shown below.**

The AIR FLOW FLAP display swings as shown below and the air flow direction continuously varies. (Automatic swing setting)

![Swing](image)

Press AIR FLOW DIRECTION ADJUST button to select the air direction of your choice.

The AIR FLOW FLAP display stops swinging and the air flow direction is fixed. (Fixed air direction setting)

### MOVEMENT OF THE AIR FLOW FLAP

For the following conditions, micro computer controls the air flow direction so it may be different from the display.

<table>
<thead>
<tr>
<th>Operation mode</th>
<th>Cooling</th>
<th>Heating</th>
</tr>
</thead>
<tbody>
<tr>
<td>Operation conditions</td>
<td>● When room temperature is lower than the set temperature</td>
<td>● When room temperature is higher than the set temperature</td>
</tr>
<tr>
<td></td>
<td>● At defrost operation</td>
<td></td>
</tr>
<tr>
<td></td>
<td>● When operating continuously at horizontal air flow direction</td>
<td></td>
</tr>
</tbody>
</table>

Operation mode includes automatic operation.

### PROGRAM TIMER OPERATION (Fig. 5)

- The timer is operated in the following two ways.
  - Programming the stop time ( ) ... The system stops operating after the set time has elapsed.
  - Programming the start time ( ) ... The system starts operating after the set time has elapsed.
  - The timer can be programmed a maximum of 72 hours.
  - The start and the stop time can be simultaneously programmed.

**Press the TIME MODE START/STOP button several times and select the mode on the display.**

The display flashes.

For setting the timer stop ... “”

For setting the timer start ... “”

**Press the PROGRAMMING TIME button and set the time for stopping or starting the system.**

![Time setting](image)

When this button is pressed, the time advances by 1 hour.

When this button is pressed, the time goes backward by 1 hour.

**Press the TIME ON/OFF button.**

The timer setting procedure ends.

The display “” or “" changes from flashing light to a constant light.

**NOTE:**

- When setting the timer off and on at the same time, repeat the above procedure from to once again.
PRECAUTIONS FOR GROUP CONTROL SYSTEM OR TWO REMOTE CONTROLLER CONTROL SYSTEM

This system provides two other control systems beside individual control (one remote controller controls one indoor unit) system. Confirm the following if your unit is of the following control system type.

- **Group control system**
  One remote controller controls up to 16 indoor units.
  All indoor units are equally set.

- **Two remote controller control system**
  Two remote controllers control one indoor unit (In case of group control system, one group of indoor units)
  The unit is individually operated.

**NOTE:**
Contact your Daikin dealer in case of changing the combination or setting of group control and two remote controller control systems.
NOT MALFUNCTION OF THE AIR CONDITIONER

The following symptoms do not indicate air conditioner malfunction.

I. THE SYSTEM DOES NOT OPERATE
   • The system does not restart immediately after the ON/OFF button is pressed.
     If the OPERATION lamp lights, the system is in normal condition.
     It does not restart immediately because a safety device operates to prevent overload of the system. After 3 minutes, the system will turn on again automatically.
   • The system does not restart immediately when TEMPERATURE SETTING button is returned to the former position after pushing the button.
     If the OPERATION lamp lights, the system is in normal condition.
     It does not restart immediately because a safety device operates to prevent overload of the system. After 3 minutes, the system will turn on again automatically.
   • The system does not start when the display shows “A” (UNDER CENTRALIZED CONTROL) and it flashes for few seconds after pressing an operation button.
     This is because the system is under centralized control.
     Flashes on the display indicates that the system cannot be controlled by the remote controller.
   • The system does not start immediately after the power supply is turned on.
     Wait one minute until the micro computer is prepared for operation.

II. WHITE MIST COMES OUT OF A UNIT
   • When humidity is high during cooling operation
     (In oily or dusty places)
     If the inside of an indoor unit is extremely contaminated, the temperature distribution inside a room becomes uneven. It is necessary to clean the inside of the indoor unit. Ask your Daikin dealer for details on cleaning the unit. This operation requires a qualified service person.
   • When the system is changed over to HEATING OPERATION after DEFROST OPERATION.
     Moisture generated by DEFROST becomes steam and exists.

III. NOISE OF AIR CONDITIONERS
   • A continuous flow “Shuh” sound is heard when the systems is in COOLING or DEFROST OPERATION.
     This is the sound of refrigerant gas flowing through both indoor and outdoor units.
   • A “Shuh” sound which is heard at the start or immediately after the stop of operation or which is heard at the start or immediately after the stop of DEFROST OPERATION.
     This is the noise of refrigerant caused by flow stop and flow change.

IV. DUST FROM THE UNITS
   • Dust may blow out from the unit after starting operation from long resting time.
     Dust absorbed by the unit blows out.

V. THE UNITS GIVE OFF ODORS
   The unit absorbs the smell of rooms, furniture, cigarettes, etc., and then emits them.

VI. THE LIQUID CRYSTAL OF THE REMOTE CONTROLLER SHOW “88”
   • It happens immediately after the main power supply switch is turned on.
     This shows that the remote controller is in normal condition.
     This continues temporary.
TROUBLE SHOOTING

I. If one of the following malfunctions occurs, take the measures shown below and contact your Daikin dealer.
The system must be repaired by a qualified service person.

WARNING

- When the air conditioner is in abnormal conditions (smell of something burning, etc.), unplug the power cord from the outlet, and contact your dealer.

Continued operation under such circumstances may result in a failure, electric shock, and fire.

- If a safety device such as a fuse, a breaker, or an earth leakage breaker frequently actuates, or ON/OFF switch does not properly work.
  **Measure:** Turn off the main power switch.

- If water leaks from unit.
  **Measure:** Stop the operation.

- If the display "□□□" (INSPECTION), "UNIT No.", and the OPERATION lamp flash and the "MALFUNCTION CODE" appears.

  ![Operation Lamp](image)

  **INSPECTION display**
  **MALFUNCTION CODE**
  **INDOOR UNIT No. in which a malfunction occurs.**

  **Measure:** Notify your Daikin dealer and inform him/her of the display.

II. If the system does not properly operate except for the above mentioned case, and none of the above mentioned malfunctions is evident, investigate the system according to the following procedures.

1) If the system does not operate at all.
   - Check if there is a power failure.
     Wait until power is restored. If power failure occurs during operation, the system automatically restarts immediately after the power supply recovers.
   - Check if the fuse has blown or breaker has worked.
     Change the fuse or set the breaker.

2) If the system stops operating after operating the system.
   - Check if the air inlet or outlet of outdoor or indoor unit is blocked by obstacles.
     Remove the obstacle and make it well-ventilated.
   - Check if the air filter is clogged.

Ask a qualified service person to clean the air filters. (Refer to p. 14)

3) The system operates but it does not sufficiently cool or heat.
   - If the air inlet or outlet of the indoor or the outdoor unit is blocked with obstacles.
     Remove the obstacle and make it well-ventilated.
   - If the air filter is clogged.
     Ask a qualified service person to clean the air filters. (Refer to p. 14)
   - If the set temperature is not proper. (Refer to p. 9)
   - If the FAN SPEED button is set to LOW SPEED. (Refer to p. 9)
   - If the air flow angle is not proper. (Refer to p. 10)
   - If the doors or the windows are open. Shut doors or windows to prevent wind from coming in.
   - If direct sunlight enters the room. (when cooling)
     Use curtains or blinds.
   - When there are too many inhabitants in the room. (when cooling)
     Cooling effect decreases if heat gain of the room is too large.
   - If the heat source of the room is excessive. (when cooling)
     Cooling effect decreases if heat gain of the room is too large.
MAINTENANCE

- ONLY A QUALIFIED SERVICE PERSON IS ALLOWED TO PERFORM MAINTENANCE
- BEFORE OBTAINING ACCESS TO TERMINAL DEVICES, ALL POWER SUPPLY CIRCUITS MUST BE INTERRUPTED
- To clean the air conditioner, be sure to stop operation, and turn the power switch off. Otherwise, an electric shock and injury may result.
- Do not wash the air conditioner with water.
- Be careful with a scaffold or staging.
Caution must be exercised because of work at a high place.

HOW TO CLEAN THE AIR FILTER

Clean the air filter when the display shows "FILTER" (TIME TO CLEAN AIR FILTER)
Increase the frequency of cleaning if the unit is installed in a room where the air is extremely contaminated.
If the dirt becomes impossible to clean, change the air filter. (Air filter for exchange is optional)

1. Open the suction grille.
   Pull it downward slowly while pressing the buttons provided on two spots.
   (Do the same procedure for closing.)

2. Remove the air filters
   Pull the hook of the air filter out diagonally downward, and remove the filter.

3. Clean the air filter.
   Use vacuum cleaner (A) or wash the air filter with water (B).
   A Using a vacuum cleaner

4. Fix the air filter
   ① Hook the air filter to a protrusion on the suction grille.
   ② Push the lower part of the air filter onto the protrusion at the lower part of the suction grille, and fix the air filter there.

5. Shut the suction grille.
   Refer to item No.1.

6. After turning on the power, press FILTER SIGN RESET button.
   The "TIME TO CLEAN AIR FILTER" display vanishes.

HOW TO CLEAN AIR OUTLET AND OUTSIDE PANELS

- Clean with soft cloth
- When it is difficult to remove stains, use water or neutral detergent.
- When the flap is extremely contaminated, remove it as below and clean or exchange it.
   (Flap for exchange is optional)

NOTE

- Do not use gasoline, benzene, thinner, polishing powder, liquid insecticide. It may cause discoloring or warping.
- Do not let the indoor unit get wet. It may cause an electric shock or a fire.
- Do not scrub firmly when washing the blade with water.
  The surface sealing may peel off.
- Do not use water or air of 50°C or higher for cleaning air filters and outside panels.
HOW TO CLEAN THE SUCTION GRILLE

1. Open the suction grille.
   Push it downward slowly while pressing the buttons provided on two spots. (Follow the same procedure for closing.)

2. Detach the suction grille.
   Open the suction grille 45 degrees and lift it upward.

3. Detach the air filter
   Refer to p. 14, “HOW TO CLEAN THE AIR FILTER”.

4. Clean the suction grille.
   Wash with a soft bristle brush and neutral detergent or water, and dry thoroughly.

5. Reattach the air filter
   Refer to “HOW TO CLEAN THE AIR FILTER (p.14)".

6. Reattach the suction grille.
   Refer to item No. 2.

7. Close the suction grille.
   Refer to item No. 1.

START UP AFTER A LONG STOP

Confirm the following

- Check that the air inlet and outlet are not blocked.
  Remove any obstacle.
- Check if the earth is connected.

Clean the air filter and outside panels

- After cleaning the air filter, make sure to attach it.

Turn on the main power supply switch

- The display on the remote controller will be shown when the power is turned on.
- To protect the unit, turn on the main power switch at least 6 hours before operation.

WHAT TO DO WHEN STOPPING THE SYSTEM FOR A LONG PERIOD

Turn on FAN OPERATION for a half day and dry the unit.
- Refer to page 9 or “FAN OPERATION”.

Cut off the power supply.

- When the main power switch is turned on, some watts of electricity is being used even if the system is not operating.
  Turn off the main power supply switch for saving energy.
- The display on the remote controller will vanish when the main power switch is turned off.
# SPECIFICATIONS
(These specifications are in compliance with SSA386, 16, 17, 18, 86, and 182.)
